

Birko Antifoam 100

Description

Birko Antifoam 100 is a proprietary blend of antifoam compounds with capacity to prevent foam or kill it immediately. Birko Antifoam is unlike similar products because it works equally well in both oil-based and water-based systems. Birko Antifoam 100 has approvals by the U.S. Department of Agriculture for food processing and is ideally suited for use in the brewery.

Directions

Suggested starting point is one fluid ounce of Birko Antifoam 100 per 15-20 barrels. For the kettle, add just prior to the wort coming to boil. For the fermenter, add directly to the whirlpool halfway through knockout.

Properties

| | |
|-----------------------|----------------------|
| Form: | Liquid |
| Color: | Opaque Yellow |
| Odor: | Slight Oil |
| pH @ 1%: | NA |
| Foam: | None |
| Biodegradable: | Yes |
| Phosphates: | No |
| Density: | 1.01 |
| USDA: | 5A |
