

Diammonium Phosphate

Product Name

Diammonium Phosphate

Other Name

Ammonium phosphate, secondary; diammonium hydrogen phosphate; diammonium phosphate; DAP

Description

Diammonium phosphate (DAP) is added to juice or must to supplement natural levels of yeast assimilable nitrogen (YAN).

Addition of DAP can stimulate yeast growth and fermentation activity and helps to prevent the formation of hydrogen sulfide.

DAP is readily soluble in water and can be added directly or as an aqueous solution.

Imported and Domestic available

Directions for use

Usually added at the beginning of fermentation and possibly again at the mid point.

Hazard Warning

See MSDS

Packaging

50 lb and 25 Kg Bag.
