

Fermo-Clean

Other Names

None

Description

Fermo-Clean is a fermentation activator containing many of the necessary nutritional needs of the yeast. While the diammonium phosphate provides the nitrogen needs of the yeast, the Alphacellulose fibers detoxify or "clean" the must through the adsorption of medium chain length fatty acids (C6-C8-C10) which are produced during normal anaerobic yeast metabolism. The Alphacellulose fibers also act as a physical support for the yeast while providing for better dispersion throughout the mass, something that is especially important in clarified musts.

Properties

- Complies with E.C. food additive specifications and Codex Oenologique International
- Alphacellulose fibers
- Diammonium Phosphate
- Thiamine Hydrochloride (Vitamin B1)
- Bentonite

Directions for use

Dissolve the product in a small amount of water or must and homogeneously disperse it in the volume to be fermented.

Hazard Warning

Eye and hand protection recommended.

Dosage

1 – 5 lbs / 1,000 gallons.

Packaging

25 Kg Bag
