

Querca-Tan MK

Other Names

None

Description

Querca-Tan MK is a preparation containing tannin composed of hydrolyzable tannins, extracted from American oak (*Quercus Petrea*) and a small amount of French oak (*Quercus petrea*) which is heavily toasted. It contains gallotannins, ellagitannins and compounds obtained from the thermal degradation of lignin and of hemicellulose which bestow the typical organoleptic notes usually derived from barrel maturation. With the post-vinification or finishing tannins it should be noted that with these finer grade tannins it is their ability to stabilize color and to improve the sensory attributes of wine that makes them useful tools. Querca-Tan MK prolongs the aromatic persistence, and softens the finish while enhancing the aromatic complexity with nuances of mocha and chocolate.

Properties

- Available in Powder

Directions for use

Mix in hot water at the ratio of 1:5. Add to the tank or barrel while circulating or mixing.

Hazard Warning

Eye and hand protection recommended.

Dosage

Red Wines: 20 – 150 ppm 0.16 – 1.2 lbs/ 1,000 gal (2-15 g/hL)

Packaging

500 Gram Container
