

# Tani-Complete

## Other Names

None

## Description

Tani-Complete consists of a highly purified concentrated oak extract from the heart of the Limousin oak region in France. It is recommended for red and white wines during the ageing process. This tannin also plays a positive role when wine is aged in older barrels or American oak barrels, which naturally contains lower ellagitannin levels. During the extraction process the original aromatic characteristics are maintained improving the final bouquet in red wines. Tani-Complete also contributes to antioxidation as well as color preservation. In white wines it would ideally be added while the wine is ageing in barrels to prevent oxidation and add complexity to the palate.

## Properties

- Available in Granular.

## Directions for use

Mix in warm to hot water at the ratio of 1:10. Add to the tank or barrel while circulating or mixing.

## Hazard Warning

Eye and hand protection recommended.

## Dosage

Red Wine : 100-200 ppm 0.80 – 1.60 lb/1,000 gal (10-20 g/hL); White Wine : 50-100 ppm 0.40 – 0.80 lb/1,000 gal (5-10 g/hL); or as desired up to 4 lbs / 1,000 gallons.

## Packaging

1 Kg Containers.
