

Querca-Tan VN (Liquid and Powder)

Other Names -

Description

Querca-Tan VN is a preparation containing tannin composed of hydrolyzable tannins, extracted from French oak (*Quercus Petrea*) and medium toast. It contains gallotannins, ellagitannins and compounds obtained from the thermal degradation of lignin and of hemicellulose which bestow the typical organoleptic notes usually derived from barrel maturation. With the post-vinification or finishing tannins it should be noted that with these finer grade tannins it is their ability to stabilize color and to improve the sensory attributes of wine that makes them useful tools. Querca-Tan VN prolongs the aromatic persistency, and softens the finish while enhancing the aromatic complexity with nuances of vanilla and cacao.

Properties

- Available in liquid or powder

Directions

LIQUID: Add directly to tank or barrel. Or maybe be diluted 1:1 if desired. Add to the tank or barrel while circulating or mixing.

POWDER: Mix in hot water at the ratio of 1:5. Add to the tank or barrel while circulating or mixing.

Hazard Warning

Eye and hand protection recommended.

Dosage

LIQUID: Red Wines: 40 – 300 ppm 0.32 – 2.4 lbs/ 1,000 gal (4-30 g/hL)

POWDER: Red Wines: 20 - 150 ppm 0.16 - 1.2 lbs/ 1,000 gal (2-15 g/hL)

Packaging

LIQUID: 1 Kg Bottle

POWDER: 500 Gram Container
